DETAILED ACTION

1. This action is responsive to the Applicant's response filed 11/14/08. As indicated in Applicant's response, claims 1, 10, 13-18 have been amended. Claims 1-24 are pending in the office action.

EXAMINER'S AMENDMENT

2. The Application has been amended as following.

In the Response submitted as per 11/14/08, there appears to be some minor syntactic impropriety in the claims and that will be amended as follows.

In the CLAIMS:

Claim 10 (1st paragraph):

A system for swapping code in a computer system including an operating system, said operating system including at least one code component and providing continual availability of hardware resources by applications operational in the computer system, the system comprising one or more ~~processing processors~~ units configured for:

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

3. As amended, claims 1, 10, 18 include additional features that render the claimed subject matter not obvious over that of co-pending Application 11/227,761; hence the Double Patenting Rejection as per the last Previous Office Action is herein withdrawn.

4. Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance.

The prior art taken separately or jointly does not suggest or teach the following features.

Art Unit: 2193

A computer method for replacing first code component with a new code component while providing continual operating system hardware resources via the first code component, the method comprising: (i) instantiating the new code component, a mediator object, and a swapping operation, using for the duration of the swapping operation the mediator object to intercept calls from the applications requesting the first code component to perform functions, and using the mediator object to perform the requested functions, (ii) establishing a quiescent state for the first code component then transferring state from the first code component to the new code component, (iii) swapping by identifying references to said first code component and replacing said references with references to said new code component, prior to de-allocating the first code component; as recited in claim 1, 10, 18.

Swingline, USPN: 6,219,690, discloses mutual exclusion algorithms using call-back processor with dynamic context structures to track and update references related to existing threads, whereby enabling redirection of memory access operations via establishing of a quiescent state based on said contexts; but fails to teach or suggest swapping first code with new code component while maintaining OS/hardware resources availability to applications serviced by the first code component, wherein the swapping includes mediator object instantiated as in (i) and used all throughout the swapping process to intercept and service existing calls to the first code component; whereby the swapping operation establishes a quiescent state enabling transferring of references as in (ii), and replaces the identified references to the first component with references to the new component as set forth and (iii).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
